Abstract

First sentence. Second sentence. Third sentence. Fourth sentence.

Contents

Figure 1: Employee numbers distribution

1 Introduction

2 Data

2.1 EDA

2.1.1 treat distribution

2.1.2 education level distribution by PID

2.1.3 sexim by education level

2.1.4 internet usage by meta.os

2.1.5 post favor by treat

3 Model

$$Pr(\theta|y) = \frac{Pr(y|\theta)Pr(\theta)}{Pr(y)} \tag{1}$$

Equation (1) seems useful, eh?

Here's a dumb example of how to use some references: In paper we run our analysis in R (R Core Team 2020). We also use the `tidyverse` which was written by Wickham et al. (2019) If we were interested in baseball data then Friendly et al. (2020) could be useful.

We can use maths by including latex between dollar signs, for instance θ.
